# ITSM guided setup

**Last updated:** December 02, 2017

ITSM guided setup provides a sequence of tasks that help you configure IT Service Management (ITSM) applications on your ServiceNow instance.

ITSM guided setup guides you through completing configuration activities that are organized in categories for common platform settings and ITSM applications. The percentage of activities that you complete for each category is displayed, so that you can monitor your progress. Each configuration activity in ITSM guided setup provides the following resources to help you:

- More information (if available for an activity)
- Contextual embedded help
- Contextual documentation on the ServiceNow product documentation site
- Guided tour (if available for an activity)

Introduction ITSM with a focus on guided setup

## Guided activities for platform configurations

ITSM guided setup helps you configure common platform settings with these activity categories:

Company

In the Company category, configure the company name, logo, and color theme to reflect your corporate brand. Also configure default system settings such as the time zone and the date and time formats.

 ©2018 ServiceNow. All rights reserved. 

Connectivity

In the Connectivity category, configure your instance to support inbound and outbound email notification. Also integrate the instance with your existing LDAP and single sign-on (SSO) solutions.

Foundation Data

If you do not use Lightweight Directory Access Protocol (LDAP) to import data into your instance, complete the activities in the Foundation Data category. Use the Foundation Data category to import users, groups, group members, companies, departments, and locations. Also assign roles to groups.

## Guided activities for configuration of ITSM applications

ITSM guided setup provides activity categories to help you configure these corresponding ITSM applications:

CMDB

The CMDB is a repository of information about your IT infrastructure and services. Complete the activities in this category to configure the CMDB for your organization.

Incident Management

Incident Management helps restore normal service operations as quickly as possible after an unplanned interruption and helps minimize the impact to your business. Complete the activities in this category to configure the incident management process for your organization.

Change Management

The Change Management application helps assess risk and reduce disruption when implementing necessary changes to IT services. Complete the activities in this category to configure the change management process for your organization.

Problem Management

Problem Management helps identify, investigate, and resolve root causes of incidents. Complete the activities in this category to configure the problem management process for your organization.

Service Catalog

The Service Catalog application helps to present the services that your organization offers to employees. Complete the activities in this category to structure and build the services that the employees can request through the service catalog.

Knowledge Management

The Knowledge Management application helps capture and share the ideas, experience, and information that your users collectively possess. Effective use of Knowledge

 ©2018 ServiceNow. All rights reserved. 

Management improves efficiency, quality of service, and customer satisfaction. Complete the activities in this category to configure the knowledge management process for your organization.

## Guided activity to prepare your ServiceNow instance for production use

After you complete all other activity categories, complete the Go Live category to take the final steps to prepare your instance for deployment.

**Note:** ITSM guided setup is not supported on tablet and mobile devices. Use one of the desktop browsers.

- Access ITSM guided setup

  You can access ITSM guided setup from the System Administration homepage or by navigating to the ITSM guided setup application if the ITSM Guided Setup (com.snc.guided_setup) plugin is active.

- ITSM guided setup user interface

  Each page of the guided setup provides various components to help you navigate to activities and monitor your progress.

- Unlock a task in ITSM guided setup

  A configuration task in ITSM guided setup can have prerequisites that must be completed before the configurations for the task can be started. Such tasks are displayed as locked until the prerequisites are completed.

- Mark a configuration task as complete or incomplete

  In ITSM guided setup, you can mark a task as complete after you finish it or if you decide to accept the default configurations. If you decide later that you want to configure the task, you can mark the task as incomplete to update the completion status accordingly.

# Access ITSM guided setup

**Last updated:** November 16, 2017

You can access ITSM guided setup from the System Administration homepage or by navigating to the ITSM guided setup application if the ITSM Guided Setup (com.snc.guided_setup) plugin is active.

## Before you begin

Role required: admin

The ITSM Guided Setup plugin is active by default for new provisioned instances. If an instance is upgraded to the Kingston release, then you must activate the plugin to enable ITSM guided setup.

Introduction ITSM with a focus on guided setup

## Procedure

1. Start ITSM guided setup from either the System Administration homepage or the application navigator.

| Option | Description |
|---|---|
| From the System Administration homepage | a. On the System Administration homepage, click Guided Setup.<br>b. On the guided setup page, click ITSM guided setup. |
| From the application navigator | Navigate to Guided Setup > ITSM Guided Setup. |

2. On the ITSM guided setup homepage, review the list of prerequisites.

 ©2018 ServiceNow. All rights reserved. 

3. Click Get started when you are ready to start the tasks for setting up your instance and ITSM applications.
4. From the category view page, you can then navigate to different pages to review each activity category and complete the tasks within them.
   For more information on the controls and various UI components on the different pages of ITSM guided setup, see ITSM guided setup user interface.

# Unlock a task in ITSM guided setup

**Last updated:** November 16, 2017

A configuration task in ITSM guided setup can have prerequisites that must be completed before the configurations for the task can be started. Such tasks are displayed as locked until the prerequisites are completed.

### Before you begin

Role required: admin

### About this task

In ITSM guided setup, the prerequisites can fall under one of the following categories:

Dependency on a plugin

Activate the required plugins to unlock the configuration task.

Dependency on other configuration activities

Complete the required activities to unlock the configuration task.

### Procedure

- To unlock a plugin-dependent task:
  1. Click the View plugins link.
  2. In the Required plugins window, select one of the required plugins.
     If only one plugin is required, it gets selected by default.
  3. Under Related Links, click Activate/Upgrade.
  4. Proceed with the onscreen instructions to activate the plugin and reload the form.

  The configuration task is unlocked.
- To unlock an activity-dependent task:
  1. Complete the prerequisite configuration activity.
  2. If the prerequisite configuration activity itself depends on other configuration activities, loop through the prerequisite activities to complete them.

  The configuration task is unlocked.

# Mark a configuration task as complete or incomplete

**Last updated:** November 16, 2017

In ITSM guided setup, you can mark a task as complete after you finish it or if you decide to accept the default configurations. If you decide later that you want to configure the task, you can mark the task as incomplete to update the completion status accordingly.

### Before you begin

Role required: admin

### About this task

 ©2018 ServiceNow. All rights reserved. 

When you mark a configuration task as complete or incomplete, the status of the corresponding category and the overall completion status are updated. You can click Configure and make the required configuration changes irrespective of whether the task is marked as complete or incomplete. When you mark a task as incomplete, only the completion status is updated, no configuration changes are reverted.

### Procedure

1. To mark a configuration task as complete, click Mark as complete.
2. To mark a configuration task as incomplete, click Mark as incomplete

 ©2018 ServiceNow. All rights reserved.
